RE: Cloud Library Sole Source

Carolyn,

Bibliotheca + 3M is the developer and sole manufacturer of the Cloud Library eBook Lending System. Our system is unique by developing the best-in-class patron experience from signing up to the service and borrowing to the ease with which it can be a returned.

A few notable features are:

- Unique in terms of patron privacy and only requiring a library barcode, allowing patrons to enjoy your collection without providing personal information to a 3rd party vendor.
- Features lists – prominently displayed in the applications – are created and curated by your staff to help create local content selection that you can promote to your community.
- Discovery Stations, a unique turnkey kiosk designed to promote eBooks to new patrons inside the library. The Discovery Station allows patrons to discover and check out a book.
- The Favorites Feature in Browse allowing patrons to create lists of their favorite categories.
- We are the only vendor with the CloudLink feature, allowing individual libraries to share content across a consortium.
- Content Acquisition Tool offering libraries best-in-class content selection.
- Curated Featured Collection Development Lists to assist staff quickly, and easily create a high performing collection.
- Cloud Library Apps for PC and Mac, the only vendor developed way to quickly and easily transfer eBooks to an eInk device like a Nook or Kobo.

Lastly, we support content transfer from and to approved publisher eBook vendors. Thank you for your interest in the Cloud Library System.

If there are any further questions or problems, please feel free to contact us.

Thank you,

Al Coalla
Director
